Yes, the MSU model is the one we are using to do adjustments to the model, rather than re-stacking the entire MPP every time.

Thanks for pulling together this overview! My quick take is that the pros/cons build the case to establishing a new method of determining minimum staffing levels. Is that the intended goal? Does SPD have an alternative staffing model to propose—is that where MSU comes in?

Hi Chris,

Thank you so much for passing this along! Admittedly, I'm still pretty confused by how this translates to how SPD determines staffing needs. Would it be possible for you or a member of your team to walk us through this presentation?

I really appreciate you pulling this. My instinct is that some of our reporters – like an SCC Insight – could do a really good story on how SPD determines staffing. I feel like this is a crucial piece to roll out and then protect the 1,400 sworn FTE count in the budget.

Let me know about a meeting to walk through this.

Best,

Kelsey

Here is a high-level overview of how MPP works. It is a ton of work to assemble, format, load, and run the data. So, we also have adapted it, along with a top-down approach from Michigan State University, to have a more agile process. I'm checking if there is any way to show the MSU approach as a follow-up to this approach aside from the robust guide attached here.
